Key Concepts in Time Series Econometrics

Understanding the foundational concepts is crucial for effective modeling:

- **Stationarity:** A stationary time series has constant mean, variance, and autocorrelation over time. Many models assume stationarity for valid inference.
- **Autocorrelation:** The correlation of a time series with its past values. Detecting autocorrelation helps in model selection.
- **Cointegration:** When non-stationary series are linked by a long-term equilibrium relationship, cointegration models can capture this connection.
- **Model Types:** Common models include AR (AutoRegressive), MA (Moving Average), ARMA,

ARIMA, and GARCH models for volatility clustering.
