Common Viva Questions with Answers in Various Subjects

1. General Science Viva Questions with Answers

Q1. What is the difference between a solid, liquid, and gas?

Answer: Solids have a fixed shape and volume due to tightly packed particles. Liquids have a fixed volume but take the shape of their container because their particles are less tightly packed. Gases have neither fixed shape nor fixed volume; they expand to fill the container as their particles are spread out widely.

Q2. What is photosynthesis?

Answer: Photosynthesis is the process by which green plants, algae, and some bacteria convert light energy into chemical energy. They use sunlight, carbon dioxide, and water to produce glucose and oxygen. The general equation is $6\text{CO}_2 + 6\text{H}_2\text{O} + \text{light energy} \rightarrow \text{C}_6\text{H}_{12}\text{O}_6 + 6\text{O}_2$.

2. Mathematics Viva Questions with Answers

Q1. What is the Pythagorean theorem?

Answer: The Pythagorean theorem states that in a right-angled triangle, the square of the hypotenuse (the side opposite the right angle) is equal to the sum of the squares of the other two sides: $a^2 + b^2 = c^2$.

Q2. How do you find the area of a circle?

Answer: The area of a circle is given by the formula $A = \pi r^2$, where r is the radius of the circle and π (pi) is approximately 3.1416.

3. Physics Viva Questions with Answers

Q1. What is Newton's First Law of Motion?

Answer: Newton's First Law states that an object at rest remains at rest, and an object in motion continues in motion at a constant velocity unless acted upon by an external force.

Q2. What is the principle of conservation of energy?

Answer: The principle states that energy cannot be created or destroyed; it can only be transformed from one form to another. The total energy of an isolated system remains constant.

4. Chemistry Viva Questions with Answers

Q1. What is an atom?

Answer: An atom is the smallest unit of matter that retains the properties of an element. It consists of protons, neutrons, and electrons.

Q2. What is a chemical reaction?

Answer: A chemical reaction involves the transformation of reactants into products through the breaking and forming of chemical bonds, resulting in new substances with different properties.

5. Computer Science Viva Questions with Answers

Q1. What is a programming language?

Answer: A programming language is a formal language comprising a set of instructions that can be used to produce various kinds of output, such as software applications or scripts.

Q2. What is an operating system?

1. Basic Conceptual Questions

These questions test foundational knowledge. For example:

- What is photosynthesis?
- Explain the principle of supply and demand.

Expert Tip: Always start with a clear definition, then elaborate with key points or examples. Use diagrams if applicable, and relate concepts to real-world applications to demonstrate depth.

2. Application-Based Questions

These assess how well you can apply theoretical knowledge to practical scenarios.

- How would you improve the efficiency of a solar panel?
- Discuss how to manage a team during a crisis.

Expert Tip: Use structured frameworks like STAR (Situation, Task, Action, Result) for behavioral questions, and for technical questions, detail step-by-step processes with rationale.

3. Analytical and Problem-Solving Questions

These questions require critical thinking.

- Given a dataset, identify the key trends.
- Solve a mathematical problem or logical puzzle.

Expert Tip: Break down complex problems into smaller parts, articulate your thought process clearly, and verify your solutions before concluding.

Subject: General Science

Q1: What is Newton's First Law of Motion?

Answer:

Newton's First Law of Motion states that an object at rest remains at rest, and an object in motion continues in uniform motion in a straight line unless acted upon by an external force. This law is also known as the law of inertia. It highlights the natural tendency of objects to resist changes in their state of motion, emphasizing the importance of forces in altering motion.

Q2: Explain the process of photosynthesis.

Answer:

Photosynthesis is the process by which green plants, algae, and some bacteria convert light energy into chemical energy stored in glucose molecules. It occurs primarily in the chloroplasts of plant cells, utilizing chlorophyll pigments. The overall simplified equation is:

This involves two main stages: the light-dependent reactions, where sunlight energizes electrons, producing ATP and NADPH; and the light-independent Calvin Cycle, where these molecules facilitate carbon fixation to synthesize glucose.
