reteach 7 4 similar triangles answer key

Understanding similar triangles is a fundamental concept in geometry that helps students solve a wide range of problems involving proportionality and congruence. When working through "Reteach 7-4 Similar Triangles," students often encounter questions designed to reinforce their understanding of the properties of similar triangles, how to identify them, and how to apply proportional reasoning to find missing side lengths or angles. This comprehensive guide aims to clarify these concepts, provide detailed explanations, and present the typical answers found in the answer key for this lesson.

Introduction to Similar Triangles

What Are Similar Triangles?

Similar triangles are triangles that have the same shape but not necessarily the same size. This means:

- Corresponding angles are equal.
- Corresponding sides are in proportion (their lengths are proportional).

Understanding similarity is crucial because it allows us to solve for unknown side lengths and angles in geometric figures, especially in cases where the triangles are scaled versions of each other.

The Criteria for Triangle Similarity

Triangles are similar if any of the following criteria are satisfied:

- Angle-Angle (AA) Criterion

Two angles of one triangle are equal to two angles of another triangle, implying the third angles are also equal.

- Side-Angle-Side (SAS) Criterion

One side of a triangle is proportional to the corresponding side in another triangle, and the included angles are equal.

- Side-Side-Side (SSS) Criterion

All three sides of one triangle are proportional to the three sides of another triangle.

Key Concepts in Reteach 7-4: Similar Triangles

Recognizing Similar Triangles

- Visual Identification: Look for triangles with identical angles or proportional sides.
- Using Angle Congruence: Check if two triangles share an angle or two angles are congruent.
- Applying Proportions: Use ratios of known sides to determine if the triangles are similar.

Properties of Similar Triangles

- Corresponding angles are equal.
- Corresponding sides are proportional.
- Corresponding altitudes, medians, and angle bisectors are proportional.

Step-by-Step Approach to Solving Similar Triangles Problems

- Identify the Given Information

- Look for given angles and side lengths.
- Determine which criteria (AA, SAS, SSS) can be applied.

- Establish Corresponding Parts

- Match angles and sides based on the problem statement.
- Draw auxiliary lines or labels if necessary to clarify.

- Set Up Proportions or Equalities

- Use ratios of corresponding sides for SSS or SAS.
- Use equal angles for AA.

- Solve for Unknowns

- Cross-multiply and solve for missing side lengths.
- Use algebraic techniques to isolate variables.

- Verify the Solution

- Check if the ratios are consistent across all sides.
- Confirm that angles match the given criteria.

Sample Problems and Their Solutions (Based on Reteach 7-4)

Problem 1: Identifying Similar Triangles

Question:

In triangle ABC, angles A and B are known. Triangle DEF has angles D and E, respectively, such that angles A and D are equal, and angles B and E are equal. Are triangles ABC and DEF similar? Why?

Answer:

Yes, triangles ABC and DEF are similar because of the AA criterion. They have two pairs of equal angles (A = D and B = E), which implies the third angles are equal as well, confirming similarity.

Problem 2: Applying the SSS Criterion

Question:

Given triangles GHI and JKL with sides GH = 6 cm, GI = 8 cm, HK = 9 cm, JL = 12 cm, and sides GI and JL are corresponding sides. Are these triangles similar?

Solution Steps:

- Match the sides:

- GH corresponds to JK
- GI corresponds to JL

- Calculate the ratios:

- GH/JL = 6/12 = 1/2
- GI/JL = 8/12 = 2/3

- Since the ratios are not equal, the triangles are not similar based on SSS.

Conclusion:

The triangles are not similar because their sides are not in proportion.

Problem 3: Using the SAS Criterion

Question:

In triangle MNO, side MN = 10 cm, and angle M measures 40°. Triangle PQR has side PQ = 15 cm, and angle P measures 40°. If the included sides MN and PQ are proportional, are the triangles similar?

Answer:

Yes. Since the included angles (M and P) are equal and the sides adjacent to these angles are proportional (10 cm and 15 cm), the triangles are similar by the SAS criterion.

Common Questions and Their Answers (from Reteach 7-4 Answer Key)

Q1: How do I determine if two triangles are similar?

A:

Check for at least two pairs of angles that are equal (AA) or verify that corresponding sides are proportional with an included angle equal (SAS), or all sides are proportional (SSS).

Q2: What is the importance of the similarity ratio?

A:

The similarity ratio (scale factor) helps find missing side lengths and understand the relationship between the two triangles? sizes.

Q3: How do I find the length of an unknown side in similar triangles?

A:

Set up a proportion between the known sides and their corresponding unknown sides, then cross-multiply and solve.

Applying Similar Triangles to Real-Life Problems

Application 1: Indirect Measurement

- Using similar triangles to measure heights or distances that are difficult to measure directly.
- Example: Measuring the height of a building using shadows and similar triangles.

Application 2: Engineering and Design

- Corresponding angles are equal.
- Corresponding sides are proportional.

Solving Problems with Similar Triangles

The reteach exercises often involve calculating missing side lengths, angles, or scale factors using the properties of similar triangles.

Step-by-Step Approach to Solving

- Step 1: Identify the given information?angles, side lengths, or ratios.
- Step 2: Determine if the triangles are similar using the similarity criteria.
- Step 3: Set up proportions based on corresponding sides.
- Step 4: Solve for the unknowns using algebra.

?D = 50°, ?E = 60°, and ?F = 70°. Are the triangles similar? Explain.

Solution:

- Since all corresponding angles are equal:
- ?A ? ?D (50°)
- ?B ? ?E (60°)
- ?C ? ?F (70°)
- By the AA criterion, ?ABC ~ ?DEF.
- Conclusion: The triangles are similar because they have equal corresponding angles.

- Problem: Triangle GHI has sides GH = 8 cm, HI = 12 cm, and GI = 15 cm. Triangle JKL has sides JK = 4 cm, KL = 6 cm, and JL = 7.5 cm. Are the triangles similar?

Solution:

- Calculate the ratios of corresponding sides:
- GH/JK = 8/4 = 2
- HI/KL = 12/6 = 2
- GI/JL = 15/7.5 = 2
- Since all three ratios are equal, the SSS similarity criterion applies.
- Conclusion: ?GHI ~ ?JKL with a scale factor of 2.

Example 3: Applying SAS to Confirm Similarity

- Problem: Triangle MNO has sides MN = 9 cm, NO = 12 cm, with ?N measuring 45°. Triangle PQR has sides PQ = 6 cm, QR = 8 cm, with ?Q measuring 45°. Are these triangles similar?
