- Define formulas at the report or group level.
- Validate formulas for accuracy and performance.

Common calculations include:

- Sum, average, maximum, minimum
- Ratios and percentages
- Conditional logic (if-then-else statements)

Step 5: Setting Up Parameters and Variants

Parameters allow users to customize report output dynamically:

- Define input variables such as date ranges, organizational units, or product categories.
- Create variants to save specific parameter configurations for repeated use.

This flexibility enhances report usability across different departments or reporting periods.

Advanced Features and Optimization Techniques

Conditional Formatting and Dynamic Layout

To improve report clarity:

- Apply conditional formatting to highlight key figures (e.g., negative profits in red).
- Use dynamic layout features to adjust report structure based on data.

Implementing User Exits and Enhancements

For complex requirements:

- Use user exits or customer enhancements to extend report functionality.
- Incorporate custom logic, validations, or data manipulations not available out-of-the-box.
