``
```

This template can be expanded to automate complex tasks.

## Core Concepts and Techniques in CATIA VBA

### Accessing CATIA Objects

At the heart of CATIA VBA scripting is understanding how to access and manipulate objects within the application. The primary object is `CATIA`, which represents the application itself. From there, you navigate to documents, products, parts, features, and parameters.

- **ActiveDocument:** Refers to the currently open document, such as a product or part.
- **Products and Parts:** Use `ActiveDocument.Product` or `ActiveDocument.Part` to access the geometry.
- **Selections:** You can select objects within CATIA to manipulate or analyze.

### Common Operations in VBA

- Creating and Modifying Geometry: Automate the creation of points, lines, surfaces, and features.
- Parameter Management: Read or update parameters within parts or assemblies.
- File Operations: Save, close, or export documents via scripts.
- Iterating through Collections: Loop through features, bodies, or parameters.

## Example: Extracting Parameters from a Part

```
``vba

Sub GetParameterValue()

Dim partDoc As PartDocument

Dim part As Part

Dim parameters As Parameters

Dim param As Parameter

Set partDoc = CATIA.ActiveDocument

Set part = partDoc.Part

Set parameters = part.Parameters

For Each param In parameters

Debug.Print param.Name & ": " & param.ValueAsString

Next

End Sub

``
```

This script lists all parameters in the active part document in the Immediate window.

```

```
Set partBody = bodies.Add()
```

```
Set sketches = partBody.Sketches
```

' Create a new sketch on XY plane

```
Set sketch = sketches.Add(part.OriginElements.PlaneXY)
```

```
Set factory = sketch.OpenEdition()
```

' Draw rectangle

```
factory.CreateLine 0, 0, 50, 0
