Sample Excerpt from a WPPSI-IV Report

Results Summary:

> The child's overall cognitive functioning, as measured by the Full Scale IQ, falls within the average range (FSIQ = 98, 95% CI: 92-104). The Verbal Comprehension Index (VCI) is within the low average range (VCI = 85), indicating relative strengths in visual-spatial reasoning but challenges with verbal expression. The Visual Spatial Index (VSI) is in the high average range (VSI = 110), suggesting strong visual-spatial skills. Fluid Reasoning (FRI) is in the average range (FRI = 95). Working Memory (WMI) is in the low average range (WMI = 82), reflecting some difficulties with short-term auditory memory tasks. Processing Speed (PSI) is in the borderline range (PSI = 78), which may influence the child's efficiency in completing tasks.

Behavioral Observations:

> During testing, the child was cooperative but demonstrated signs of fatigue after approximately 45 minutes. Attention was variable, especially during tasks requiring sustained mental effort. The child appeared motivated but occasionally needed prompts to stay on task.

Interpretation:

> The child's profile suggests relative strengths in visual-spatial reasoning and areas of concern in processing speed and working memory. These patterns are consistent with certain learning profiles and should inform targeted interventions focusing on enhancing working memory and processing skills.
